

DOORS & WINDOWS

Shut the doors and windows!

To reduce the amount of heating energy to a minimum and to prevent wasting energy, doors (including large workshop doors), and windows should be shut when there is no need to keep them open otherwise all the heated energy leaves the buildings again. Every °C less temperature saves 6% of energy!

COMPRESSORS & LEAKING WATER

Whenever you find a leaking pipe or tap, please immediately report it to the Work Order Section to solve the problem.

A lot of energy is wasted each year through undetected leakages from compressed-air pipes and joints. This costs a lot of money and harms the environment.

A lot of water is also lost through leaky faucets and pipes each year. This means that money is also being wasted.

Work Order Section: DSN 354-6342

ELECTRICAL EQUIPMENT

Make sure lights and electrical equipment are switched off when not in use!

Often outside lights stay switched on during daylight hours (see picture below). Likewise electrical equipment is often running although not in use. Therefore a significant amount of energy is wasted throughout the year resulting in a huge loss of US Army money and needless production of air pollutants contributing to global warming.

If you cannot switch off the lights manually contact the Work Order Section (DSN: 354-6342) to change the settings of the system.

POLLUTION PREVENTION

Part of USAG Schweinfurt Environmental Program is Pollution Prevention (P2), an approach that aims to prevent environmental problems before they occur. That means we're looking at e.g. reducing the generation of waste and the amount of energy that's being used in the Garrison to reduce the environmental impact.

Although Pollution Prevention is managed by the Environmental Division, each member of the community plays an important role in the process, it's a teamwork effort and the Environmental Division welcomes input from everyone!

If you have any questions regarding environmental issues or if you see opportunities for improvement of USAG Schweinfurt's environmental performance let the Environmental Division know!

We provide:

- Advice and Support
- Information Material
- Specific Training

Environmental Division: DSN 354-6795

SAVING MONEY & PROTECTING THE ENVIRONMENT

The USAG Schweinfurt pays more than 6 Million Dollars each year for energy.

Hundreds of thousands of Dollars could be saved each year by using energy more efficiently.

Also the wasting of energy produces huge amounts of air pollutants needlessly.

The pollutants like Carbon Dioxide (CO₂) or Nitrogen Oxides (NO_x) which are emitted into the air are harmful to human health and amongst other negative consequences contribute to the process of

global warming. The effects of Global Warming are significant and will change life on earth considerably. Everyone should get involved in preventing the worst case outcome.

Help to save energy and protect the environment by simply sticking to the tips in this flyer!
